

Forestrike

GOAL: MANAGE LIGHTNING

- Get warned of an upcoming thunderstorm in order to inform players in due time, and insure their safety on the green.
- Get notified of the end of the thunderstorm to resume normal activity.

LIGHTNING AND GOLF PLAYERS

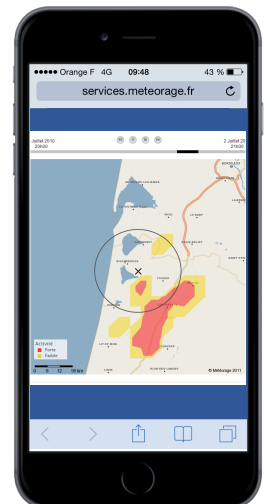

Lightning is a phenomenon that constitutes a hazard for any outdoor activity. The risk is increased by the use of metallic equipment and the isolated position on the green.

METEORAGE allows golf managers to insure the safety of players and staff. The security is improved thanks to a reliable professional service.

PRINCIPLE OF THE SERVICE

- 1 METEORAGE sends you a warning by text message and email, when lightning is detected by the METEORAGE network within a defined perimeter around your golf. The warning gives the user a sufficient advance notice to implement protective measures:
 - Inform and shelter people on the green
 - Optimize the suspension of a competition in order to finish the tournament
 - Stop outdoor works and maintenance operations
- 2 A visual information showing the movement of the thunderstorm is available during the entire alarm duration. It allows you to estimate the size and the direction of the phenomenon
- 3 As soon as the situation permits, you receive an end of alarm message in order to resume normal activity.

+ We will provide you with a poster stating **"Site under thunderstorm surveillance, by Meteorage"** to inform your clients on the provisions that you take.

Visualize the evolution of the thunderstorm in real time
